day 1st of ML

1. Business problem to ML problem

Ex:- Netflix — churn rate ↓ 100 − 2% ↓
└ 4% └ 98%
└ inven └ 2%
└ 3.75
└ 2.5

Increase usery
└ 4% − 3.75%

2. Type of problem:- जो लोग चले गए हैं उनको रोकना है।

churn rate reduced

Big picture → end product

prediction ← {How are going to leave why?}

next month discount

Ment problem like In content UI problem.

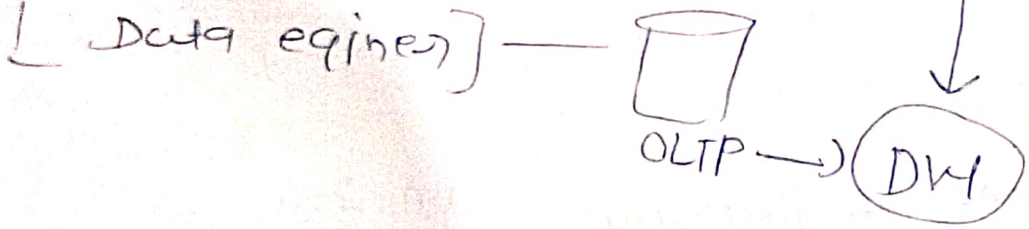
① supervised
↳ classification

Regression

3. Current solution → overall churn Rate − 5% [−7, 10%]
− 6%
└ factor

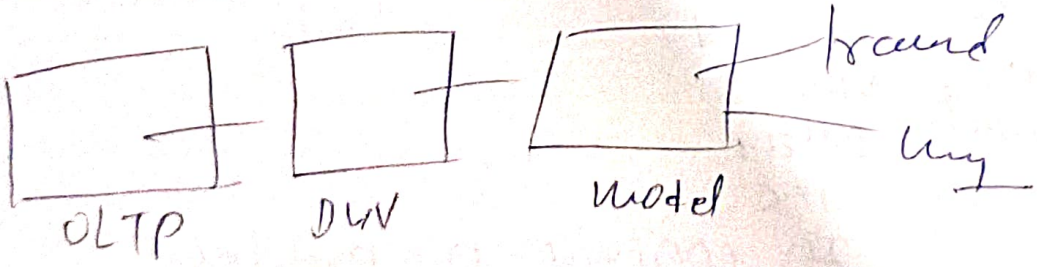
4. Getting data

- watch time
- search but did not find
- content left in the middle
- clicked on recommantion
  (order of Recommadation)



5. metrix ~~to~~ major

6. online Vs Batch?



7. check Assumptions:-
